Abstract (en)

[origin: WO2021175368A1] The invention relates to a motor vehicle lock, in particular a motor vehicle side door lock, which is equipped with a locking mechanism (1, 2) composed, essentially, of a rotary latch (1) and a pawl (2). Also comprising an actuating lever (4) for the locking mechanism (1, 2) and a release lever (6) for the pawl (2). Both levers (4, 6) can be coupled and uncoupled to/from each other by means of a coupling lever (7). A mass inertia element (12) which uncouples the coupling lever (7) at least in the event of a crash is also provided. According to the invention, the clutch lever (7) is actuated in normal operation at least slightly with respect to its bearing (8) whenever the actuating lever (4) is acted upon.
