Abstract (en)

[origin: WO2021175693A1] The invention relates to a connecting apparatus (100) for connecting a current-carrying element (300) to a rail element (200), comprising - a receptacle body (110) to which the current-carrying element (300) can be fastened, wherein the receptacle body (110) has a first transverse side (112) and a second transverse side (113), which is situated opposite the first transverse side (112), and a first longitudinal side (114) and a second longitudinal side (115), which is situated opposite the first longitudinal side (114), - a first latching arm (116) for fastening the connecting apparatus (100) to the rail element (200), and - a second latching arm (117) for fastening the connecting apparatus (100) to the rail element (200), wherein the first latching arm (116) is joined to the first transverse side (112) of the receptacle body (110) and wherein the second latching arm (117) is joined to the second transverse side (113) of the receptacle body (110).
