Abstract (en)
The present invention provides a refillable container, including a shoulder sleeve, including a top wall and a side wall bent and extending downward from the edge of the top wall; a hose, used for holding liquid, wherein a liquid outlet end of the hose is detachably connected to the inner side of the top wall; an outer cylinder, detachably connected to the side wall and accommodating the hose therein; and a cylinder cover, detachably connected to the side wall of the shoulder sleeve and opposite to the outer cylinder. The packaging container of the present invention includes an outer package composed of the shoulder sleeve, the outer cylinder and the cylinder cover and an inner package composed of the hose, and the hose is detachably connected with the outer package. After the contents of the hose are used up, the hose can be replaced with a hose full of liquid, and the outer package can be reused, so that the packaging cost of products can be greatly reduced, and the produced waste can be reduced.
