Abstract (en)  
A distance keeper (3, 3', 3'') for use when stacking roof windows (2, 2', 2'', 2''') having an engagement section (31) configured for engaging a frame of a first roof window and a support section (32) configured for supporting a frame (21) of second roof window (2, 2'') stacked on top of the first roof window (2, 2'). The support section comprises a projecting part, which is configured for insertion in a groove (23) of the second window frame. For stacking roof windows the following steps are performed: providing a first roof window; arranging a plurality of distance keepers on the frame of the first roof window by bringing the engagement section (31) into engagement with the frame and so that the support section is located vertically above said frame; and arranging a second roof window such that it is supported by the support sections (32) and so that the projecting parts project into a groove (23) of the second roof window.
