Abstract (en)

[origin: CN115595700A] The invention relates to a warping device and a method for generating a lease in a yarn sheet, in particular to a warping device having a warping drum, a yarn sheet feed path and a lease device (1), the lease device (1) having a shuttle path forming device in the yarn sheet feed path and a lease thread insertion device (8), by means of which lease threads (5, 6) can be inserted into the yarn sheet feed path. 10) are inserted into a shuttle path (4, 9) formed by the separated yarn sheets (2, 3). High productivity of the warping machine is expected to be achieved. For this purpose, a lease wire joining device (12, 13) is arranged laterally next to the yarn sheet path.
