Abstract (en)
A refrigeration appliance comprises at least one compartment for the storage of products to be cooled and an outer cabinet (2) enclosing said at least one compartment and a refrigeration system (100; 210) configured to cool said at least one compartment and comprising a closed refrigerating circuit (102; 202) filled with a refrigerant. A working chamber (20) is apt to receive at least one component (102a, 114) of the refrigerating circuit (102; 202) and/or at least one electrical cable (116; 216) for the functioning of the appliance, wherein at least one chamber wall (30A, 30B) at least partially delimits the working chamber (20). The appliance (1; 201) comprises a holding device (50A, 50B) apt to be removably connected to said at least one chamber wall (30A, 30B) and apt to at least temporarily hold said at least one component (102a, 114) of said refrigerating circuit (102; 202) and/or said at least one electrical cable (116; 216).
