Abstract (en)

The present invention provides a power supply line device and a combination system having at least one set of household appliance. The power supply line device is used for powering at least one set of household appliance. The power supply line device comprises a plug line and a first line body pluggably and electrically connected to the plug line, a first end of the plug line is provided with a plug for plugging in an external power supply, the first line body comprises a first plugging interface and a first power supply interface electrically communicated with the first plugging interface, and the first plugging interface is pluggably and electrically connected with a second end of the plug line. The power supply line device and the combination system having at least one set of household appliance according to the present invention make the costs lower and the structure simpler and compacter.
