Abstract (en)

[origin: WO2021180968A1] There is provided an aerosol-generating article (1) for producing an aerosol upon heating. The aerosol-generating article comprises a rod of aerosol-forming substrate (12) and a filter positioned downstream of the rod of aerosol-forming substrate. The rod of aerosol-forming substrate and the filter are assembled within a wrapper (22). The aerosol-generating article comprises first and second air ingress zones (15, 115) located on the wrapper. The first and second air ingress zones are each configured to allow the ingress of air into the interior of the aerosol-generating article. The first air ingress zone is located at a first position along the aerosol-generating article and the second air ingress zone is located at a second position along the aerosol-generating article. There is also provided an aerosol-generating system (100) comprising the aerosol-generating article and an aerosol-generating device (10).
