Abstract (en)

[origin: WO2021180324A1] The invention relates to a device for adjusting the inclination of the seat base of a seat with respect to a means of support of the seat base mounted on top of the seat leg, and comprising: - a base frame of the padded seat, comprising two longitudinal brackets and two transverse shafts connecting the brackets; - at least two cams (4, 4') rigidly attached to a rotary shaft controlled by manual control means; comprising eccentric disc shafts (4, 4') each interacting with at least two follower lugs (10, 11) projecting from the brackets and having at least one outer profile (6) and at least one inner profile (7) for guiding the lugs (10, 11).
