Abstract (en)  
[origin: WO2021181017A1] The invention relates to a vehicle (V) comprising: - a rechargeable battery (BR), - a base (ER), to which are fixedly connected a first socket (P1) which is suitable for recharging the battery (BR) with direct current and comprises two first pins, each pin being provided with a first sensor measuring the temperature, and a second socket (P2) which is suitable for recharging the battery (BR) and comprises two second pins, each pin being provided with a second sensor measuring the temperature, and - a processor (PR) and a memory (MD) which, during a recharge using the first socket (P1), are arranged to trigger the interruption of this recharge when the first sensors are defective.
