Abstract (en)

[origin: WO2021219327A2] The invention relates to, among others, a railway system (10) with a diagnostic system (20) for monitoring railway components (31-34) of the railway system (10) and at least one railway component (31-34) connected to the diagnostic system (20). According to the invention, with respect to the railway system (10), the railway component (31-34) is designed to automatically transmit a self-describing data set (DS34, DS34') to the diagnostic system (20) and/or allow the diagnostic system (20) to request such a data set (DS34, DS34') as part of a plug-and-play method after being connected, and the diagnostic system (20) is designed to receive the data set (DS34, DS34') from the railway component (31-34) and to integrate the railway component (31-34) into the remaining diagnostic operation on the basis of the data set (DS34, DS34').
