Abstract (en)

[origin: WO2021180628A1] The present invention relates to a method for treating a biological sample contained in a transport medium. At least one complexing agent is added to the transport medium, which complexing agent forms complexes with alkaline-earth metal ions. In the method, a device (20) can be used which comprises, in succession, a porous volume filter (21) and a membrane filter (22) having a pore size in the range of 0.2 µm to 2.0 µm.
