Abstract (en)
[origin: CN115552011A] A vaccine composition for inducing immunity against coronavirus in a subject comprises a recombinant nucleic acid encoding an N-ETSD, which is a modified nucleocapsid protein comprising an endosomal targeting sequence, and/or a recombinant nucleic acid encoding an S-fusion, which is a modified spike protein with improved surface expression. The vaccines can be formulated as recombinant nucleic acids, recombinant yeasts, and/or recombinant viruses, such as adenoviruses, and can be administered via injection and/or mucosal delivery.
