Abstract (en)

[origin: WO2021180534A1] The invention relates to a drive device (1) for a braking device of a motor vehicle, said drive device comprising: an electric machine (2) which has a housing (5) and a rotor (4) rotatably mounted in the housing (5); and a rotor position sensor device (7) which has a printed circuit board (8) having at least one sensor element associated with the rotor (4), wherein the printed circuit board (8) is in the form of a circular disc and is positioned coaxially with respect to a rotational axis of the rotor (4). According to the invention, the printed circuit board (8) is fastened in or on the electric machine (2) by means of at least one latching connection (17).
