Abstract (en)  
[origin: WO2021185584A2] The invention relates to a cartridge for an electronic cigarette or a portable inhaler, comprising a rigid reservoir for receiving a liquid, wherein the reservoir has at least one extraction opening which is designed to enable the extraction of liquid from the reservoir, the reservoir comprising one or more elements for pressure regulation in the interior of the reservoir, which elements are arranged in the wall of the reservoir and through which liquid cannot exit from the reservoir, wherein the elements for pressure regulation are selected, independently of each other, from the list consisting of non-return valves, gas-permeable but liquid-impermeable membranes and deformable wall portions.
