Abstract (en)  
[origin: WO2021185981A1] The invention relates to a distribution head comprising an insert (20) which is provided with a cam surface, a ring (10), to which a lever (30) provided with a trigger is articulated, and at least one cam follower. The lever and the cam surface being able to rotate relative to each other between a closed position and an open position. According to the invention, the insert (20) is configured to be blocked in terms of rotation relative to the container (80) and the rod (82) of the valve, the ring is an adjustment ring (10) which is configured to rotate relative to the container (80) and the insert (20) about the main axis (A) of the valve in order to bring the lever (30) and the cam surface (22) into an open or closed position. Tamper-evident means may be provided in the insert in order to ensure the integrity of the distribution head before the first use.
