Abstract (en)

[origin: WO2021185688A1] The present invention relates to a system for odorising a gas, preferably a renewable gas (e.g. biogas, preferably biomethane), circulating in a pipeline (V), the system comprising a closed loop circuit and a duct line which connects the closed loop circuit to the pipeline (V), the closed loop circuit comprising a tank (R) with an odorant fluid, a circulation means (P) and a pressure control means (MP), the duct line comprising at least one means for controlling the flow (MD) of the odorant fluid. Moreover, the system comprises at least one damping means (MAM). The invention also relates to a method for odorising a gas using the system described above.
