Abstract (en)

The present disclosure relates to an air conditioner including: a; a panel which is disposed in the lower side of the case, and has an inlet and a plurality of outlets disposed around the inlet; a fan which is disposed in the case; a plurality of wind adjuster which is disposed in each of the outlet, and adjusts a wind direction of air flowing through each of the outlet in the up-and-down side direction; a camera which obtains an image of an indoor space; and a controller which controls the wind adjuster based on image information obtained from the camera, wherein the controller divides the plurality of outlets into a first area outlet and a second area outlet, and adjusts each of the plurality of wind adjusters so that air discharged from the first area outlet and air discharged from the second area outlet are formed differently in the up-and-down side direction.
