Abstract (en)

The present invention discloses an automatic water supply device and a refrigerator having the same. The automatic water supply device comprises a water vessel(100), a bracket(200) for placing the water vessel(100), a detection device(300), and a water supply mechanism(400) for supplying water to the water vessel(100), the water vessel(100) comprising a water filling port(110); the detection device(300) comprises a sensing unit(320) and a switch movably connected to the bracket, and the sensing unit(320) comprises a sensor(321) fitted with the switch and an inductive element(322) capable of rising or falling along with a liquid level; the water supply mechanism(400) comprises a water supply pipe(410) and a water valve provided on the water supply pipe(410), and an outlet of the water supply pipe corresponds to the water filling port(110) of the water vessel(100); the automatic water supply device further comprises a controller, the sensor(321) switches between an ON state and an OFF state based on the movement of the switch, and the water vessel(100) is placed on the bracket(200) to touch the switch, thereby driving the sensor(321) to be in the ON state; the sensor(321) detects a position of the inductive element(322) in the ON state to judge the liquid level in the water vessel(100); the controller controls the water valve to open or close according to the detection signal received from the sensor(321).
