Abstract (en)

The invention relates to a multiple-charge remote-acting electroshock weapon with electrical stunning means for use primarily by law enforcement agencies and also for civilian self-defence. Field of use: Multiple-charge remote-acting electroshock weapon for law enforcement services and civilian self-defence. Technical result: The creation of an electroshock weapon for effectively immobilizing several targets simultaneously, with more rapid reloading and a corresponding increase in overall operating reliability and efficiency. The present electroshock weapon comprises a housing, a source of electrical energy, an electronic circuit for generating a high stunning voltage, several firing cartridges, several mechanical cartridge locks with a human-powered actuator for deliberately unlocking a firing cartridge from the housing of the weapon, said actuator being activated by a finger of the user holding the weapon, and an electromechanical high-voltage switch for supplying a high stunning voltage to the firing cartridges.
