Abstract (en)
[origin: WO2021197525A1] The invention relates to a defoliating device (3) comprising at least two defoliating units (100, 200) which are located on the rear side of a common panel (7) of the device (3), the front-side surface of which panel faces a plant to be defoliated, wherein the panel (7) is provided with working openings (8, 9) or cut-outs, through which the defoliating units (100, 200), which are located on the rear side, act on the plants, wherein the defoliating device (3) can be moved past the plants in a working direction, and wherein in each case two defoliating units (100, 200) having different ways of operating are arranged one behind the other in the working direction such that said units act sequentially on the plant region to be defoliated.
