Abstract (en)

[origin: CA3170957A1] The present invention relates to a holding element for positioning back parts (11) or parts thereof of poultry carcasses having a neck side (12) and a hip side (13) as well as a body exterior side (14) and a body interior side (15), wherein the back part (11) comprises a spinal column (16) or parts thereof and a rib structure (17) having at least vertebral rib pairs (18) or parts thereof, and wherein the back part (11) comprises a region, on the exterior side of the body relative to the rib structure (17), that has back-flesh (19), which holding element comprises a holding device (20), wherein the holding device (20) comprises at least one controllable clamping element (21), wherein the at least one clamping element (21) is configured and adapted to releasably fix the back part (11) at least in some regions on the holding device (20) by non-positive and/or positive locking engagement with the body interior side (15).
