Abstract (en)

[origin: WO2021197544A1] The invention relates to a clamping insert (5) for clamping jaws (2) of a clamping chuck (1), comprising holding segments (4) with a multi-part design to be fastened to the clamping jaws (2). In each holding segment (4), individual clamping teeth (18) are held, which together describe a curved toothed engagement contour (12) corresponding with the dimensioning of a toothed component (13) to be clamped, the plurality of clamping teeth (18) being received in the holding segment (4) with play in the circumferential direction.
