Abstract (en)
[origin: WO2021198854A1] The invention relates to a container (1) with a base (2) and lateral walls (3, 4) which lie opposite each other, said container having a separating wall (6) for the purpose of dividing the interior of the container (1). The lateral edges (6a) of the separating wall (6) are provided with protruding contoured sections (7) which can be inserted into grooves (5) in the lateral walls (3) in a formfitting manner. According to the invention, each of the protruding contoured sections (7) has an elastic protrusion (10) on the contour lower end, said elastic protrusion extending outwards at an angle to the lateral edge (6a) of the separating wall (6). The elastic protrusions (10) are used as an installation aid when inserting the separating wall (6) into the grooves (5) in that the grooves (5) are easier to reach, in particular in the case of containers with lateral walls which curve outwards at the upper edges due to fatigue, wherein the elastic protrusions (10) yield upon inserting the separating wall (6) downwards into the grooves (5).
