Abstract (en)  
[origin: WO2021191570A1] The present invention relates to a stopper (1) for closing the reducer (51) of a container (50), such as a bottle, the stopper (1) being designed to contain a fluid, said stopper comprising at least a first part (10) and a second part (20), said first and second parts (10, 20) delimiting a chamber (15) for receiving said fluid, said first and second parts (10, 20) being movable, by being shifted, from an initial first position of the stopper (1), for containing said fluid in said chamber (15), to a final second position of said stopper (1), for dispensing, with the aid of said shifting movement, said fluid from said chamber (15) of the stopper (1), in order to allow said stopper (1), when the stopper (1) is positioned on the container (50), to transfer the fluid towards the container (50), said stopper (1) comprising an additional element (30) that is movable from a first position, designed to allow the evacuation of the air from the container (50), to a second position, designed, together with said first part (10) and/or second part (20) of the stopper (1), to close said reducer (51) of the container (50).
