Abstract (en)
[origin: WO2021190782A1] The invention relates to a closure device (1) for laterally surrounding a usable surface (2), which can be covered with a floor cover (6), of a balcony or a patio, having a closure profile (3) with an anchoring limb (4) that can be placed on the usable surface (2) and a drainage gutter (16) which is formed on or can be fixed to the closure profile (3) such that water flowing over the usable surface (2) can be collected in the drainage gutter (16) and can be discharged. The drainage gutter (16) and the closure profile (3) are connected together via at least one rod-shaped securing element (15), wherein a securing element seat (14) and a receiving section (20) are formed on the drainage gutter (16) and on the closure profile (3) such that the securing element (15), which is secured in the securing element seat (14) and in the receiving section (20) in a formfitting manner, produces a height-adjustable fixation of the drainage gutter (16) to the closure profile (3).
