Abstract (en)

[origin: WO2021191100A1] The invention relates to a system comprising a device and an operating element, wherein said device comprises a work surface and is designed to carry out at least one process, and the operating element is designed such that said process of the device is carried out depending on the position of the operating element with respect to the device, the operating element being freely placeable relative to the device, and a sensor system which detects at least one characteristic of the operating element on the work surface and actuates the process of the device element depending on this detection, is provided.
