Abstract (en)
The present application relates to the field of smoking sets, and provides an aerosol generation apparatus and a control method therefor. The method includes: determining total energy generated by heating of a heater within a preset time, and performing dry-burning detection according to the total energy generated by heating of the heater within the preset time, where the preset time is greater than or equal to duration when the temperature of the heater rises from an initial temperature to a preset target temperature. According to the present application, dry-burning detection is performed according to the total energy generated by heating of the heater within the preset time, avoiding the problem of damage to a heating component when the heater is in a dry-burning state while a cigarette is not inserted into the aerosol generation apparatus. Therefore, user experience is improved.
