Abstract (en)

A furniture hinge device capable of implementing wide range loading, comprising a housing (1) and a fixing plate (2). A linkage assembly is provided between the housing (1) and the fixing plate (2). A lever assembly and a power assembly are provided on the housing (1). The power assembly comprises a primary spring (3) and a secondary spring (4). Positioning ends of the primary spring (3) and the secondary spring (4) are respectively mounted, from bottom to top, at a lower swinging end of the lever assembly. An adjustment assembly (5) is provided on connection ends of the primary spring (3) and the secondary spring (4). A fixing part of the adjustment assembly (5) is fixedly mounted on a side plate of the housing (1). Adjustment parts of the adjustment assembly (5) are respectively rotatably connected to the fixing part of the adjustment assembly (5) and are connected to adjustment ends of the primary spring (3) and the secondary spring (4), such that an operation length of the power assembly can be adjusted according to actual applications to adjust the magnitude of an action force.
