Abstract (en)
[origin: CA3222232A1] The invention relates to a breechblock head (1) with an extractor (2) for cartridge cases, comprising a cylindrical body (11) with a locking portion (13) having a breechblock face (15), an undercut, groove-shaped recess (12) extending rearwards for an extractor (2) with an extractor claw (22) and a leaf spring (3), and an inwardly projecting bearing extension (23) and a second lever arm with a rearwardly projecting spring bearing (24), wherein the bearing extension (23), for contact with the extractor axis (21) in the fitted state, is configured to be hook-shaped with a rearwardly open bearing opening (231), and, on the body (11), the groove-shaped recess (12) for receiving the leaf spring (3) is open tangentially on one side with respect to the circumferential direction at least partially laterally via a push-in region (122) and is designed so as to merge laterally and/or rearwardly into the undercut (121), and, in the region of the extractor axis (21) relative to an imaginary plane of the recess (12), the body (11) has a depression (16) for receiving the bearing extension (23).
