Abstract (en)
[origin: EP4130878A1] According to the present invention, it is possible to provide an actinic ray-sensitive or radiation-sensitive resin composition containing a resin of which a solubility in a developer changes by the action of an acid, a photoacid generator (A) that has a group having a polarity which changes through decomposition by the action of an acid, a photoacid generator (B) that generates an acid having a higher pKa than an acid generated from the photoacid generator (A), and a basic compound; and an actinic ray-sensitive or radiation-sensitive film, a pattern forming method, a method for manufacturing an electronic device, an actinic ray-sensitive or radiation-sensitive resin composition for manufacturing a photomask, and a method for manufacturing a photomask, each of which uses the composition.
