Abstract (en)
[origin: EP4131668A1] Socket in a plug-and-socket connection, said socket being essentially cup shaped and having a guided cover plate movable in axial direction to close the socket in a nonoperating state, said cover plate being guided in the socket, taking a springloaded first position in its nonoperating state, and being movable axially and/or rotatory to a second position at a bottom bearing surface of the socket when inserting a plug into the socket, whereby a first guiding means to guide said cover plate while axially and/or rotatory moving down into the socket is provided by the peripheral surface area of said cover plate slidably interacting with the inner surface of the socket being essentially cylindrical, said peripheral surface area of the cover plate forming a spherical profile with its diameter tapering towards the bottom of the socket.
