Abstract (en)

[origin: WO2021203148A1] The invention relates to a device for adjustably arranging the hinge position of a support strap, comprising: - a guide rail (4) and - a hinge element (1, 2) with a support (7), which can be moved along the guide rail (4) and is guided on a first lateral surface (8) of the guide rail (4) and to which the support strap is hinged, a support surface (10) of said support (7) forming contact surfaces together with the first lateral surface (8) of the guide rail (4), and with a pretensioning means (11), which is arranged on the support (7) and extends from the support (7) to a second lateral surface (9) of the guide rail (4) and which forms a force introduction surface (12) on the second lateral surface (9), wherein the pretensioning means (11) comprises a lever (13) which is mounted in a rotational point (14) that adjoins the second lateral surface (9) and is supported in a non-movable manner relative to the support (7).
