Abstract (en)

[origin: WO2021204849A1] The invention relates to a method and a computer system for determining the relevance of a text. The method comprises the following steps: determining (201) the similarity of the text (D1, D2) to texts (Di) of a stock, the text (D1, D2) being compared with each of the texts (Di) of the stock in the context of an individual comparison by ascertaining a similarity value (S) which indicates the similarity between the respective two texts; assigning (202) the similarity value (S) at least to that one of the two texts of the individual comparison carried out which was published at an earlier time or which was first acquired at an earlier time by an acquisition system; calculating a relevance value (SRank) from the similarity values (S) which were ascertained in the individual comparisons and were assigned to the text (D1, D2), and storing the calculated relevance value (SRank) and/or transmitting the calculated relevance value (SRank) via a computer network to a communication end system (Ni, Nj).
