Abstract (en)
This document discloses a solution for testing a personal safety device in a convenient manner. According to an aspect, a method comprises in a mobile testing device: acquiring a device identifier from the personal safety device; selecting the personal safety device for testing; sending, to a server configured to receive alarm messages from the personal safety device, a message indicating a test mode for testing the personal safety device, the message disabling alarming for the personal safety device at the server; receiving, during the testing, an alarm message from the personal safety device over a direct radio link between the mobile testing device and the personal safety device, wherein the alarm message from the personal safety device indicates depression of an alarm button of the personal safety device; and in response to receiving the alarm message, indicating an alarm condition on a user interface of the mobile testing device.
