Abstract (en)

[origin: WO2021212113A1] A computing device can authenticate a user account associated with a user. The computing device can scan an area to determine a scannable identifier associated with a vaccination dose. The computing device can determine a batch number and a lot number associated with the vaccination dose based on the scannable identifier. The computing device can determine a location associated with the at least one computing device. The computing device can receive a provider confirmation code corresponding to a provider. The computing device can perform a verification that the provider confirmation code matches an assigned provider confirmation code corresponding to the provider. The computing device can associate the vaccination dose with the user account in the data store as having been given to the user.
