Abstract (en)

[origin: WO2021209626A1] The invention relates to an electrical interconnection device (5) for grounding electrical conductors (2, 4), comprising a terminal block (6) having a main body (30), first orifices (28) formed in the main body and reception zones provided to accept the electrical conductors, and tightening members (7) configured to be introduced into the first orifices in the main body and to secure the electrical conductors to the terminal block and interconnect them electrically for the grounding thereof; characterized in that it is provided with at least one linking member (8) secured by a first end (27) to the main body of the terminal block and having attachment zones (26) to which the tightening members are mechanically connected.
