Abstract (en)

A carousel machine that performs a manufacturing process, where said machine has a mobile disc (10), configured to rotate around its own axis, with a plurality of cups (7) disposed around an external perimeter of said disc (10); and a fixed structure (2) with regard to which the mobile disc (10) rotates. Said carousel machine (1) comprises a geared mechanism having in turn a rigid, fixed crown wheel (3) concentric with the circular mobile disc, and a drive gearwheel (4) installed on the fixed structure (2) and engaged interiorly with the crown wheel (3) and disposed eccentrically to said crown wheel (3); where said drive gearwheel (4) is operable by a motor (6) in such a way that by activating the drive gearwheel (4) a synchronised circular movement of the mobile disc (10) with regard to the fixed structure (2) is produced, between the stages of the process of the carousel machine.
