Abstract (en)

The present disclosure relates to an electronic device including a shield can. An electronic device according to one embodiment of the present disclosure may comprise a first printed circuit board including a first surface facing a first direction and a second surface facing a second direction that is the opposite direction of the first direction, a second printed circuit board disposed spaced apart from the first printed circuit board and including a third surface facing the first direction and a fourth surface facing the first surface of the first printed circuit board, at least one electronic component disposed on the first printed circuit board and the second printed circuit board; an interposer positioned between the first printed circuit board and the second printed circuit board and electrically connecting the first printed circuit board and the second printed circuit board, and a shielding structure positioned in at least one area of the third surface of the second printed circuit board and electromagnetically shielding the at least one electronic component.
