Abstract (en)

[origin: WO2021214088A1] The disclosure describes a spring device for a shoe, for arrangement between an insole and an outsole. The spring device comprises a lower outsole portion and an upper insole portion, wherein the lower outsole portion and the upper insole portion are connected to each other via a curvature. At least one portion of the curvature has a continuously varying radius of curvature, which increases towards the outsole portion. Both portions can be substantially parallel to each other in the rest state.
