Abstract (en)
[origin: WO2022233446A1] A connection arrangement (100) for a fitness, beauty or wellness device (10) comprises a carrier plate (150); a first pump connection (110) and a second pump connection (120), which are arranged at a predefined distance (d) from each other on the carrier plate (150); a first air chamber connection (130), which is connected to the first pump connection (110), and a second air chamber connection (140), which is connected to the second pump connection (120). The first pump connection (110) and/or the second pump connection (120) are/ is movable, counter to the action of a restoring force, from a normal position (I) to a connection position (II), such that, by means of a force acting on the first pump connection (110) and/or on the second pump connection (120), the distance (d, d') between the pump connections (110, 120) is modifiable, and therefore the pump (300) can be introduced between the pump connections (110, 120) and then connected to the pump connections (110, 120). The pump (300) is held permanently on the connection arrangement (100) by the connection to the pump connections (110, 120).
