Abstract (en)

[origin: WO2021260320A1] The invention relates to a suction cutting conveyor of an automatic blade cutting machine for sheet materials, comprising a plurality of cutting supports (14) rigidly connected to a drive mechanism driven along rectilinear and curvilinear paths, each cutting support comprising a plurality of bristles (16) each having a foot (16a) rigidly connected to a sole (18) and a head (16b) opposite the foot and on which a sheet material to be cut is intended to rest, the sole of each cutting support being capable of deforming elastically in accordance with the trajectories of the drive mechanism.
