Abstract (en)
[origin: WO2021214670A1] A terrace canopy comprising a column constructed of a set of profiles. The set comprises a core profile wherein at least one side (71) of the core profile is provided with at least one mounting means (77) and at least one cover profile (78) attachable to one side of the core profile by means of the mounting means in that side. After attachment to the core profile, each cover profile forms the visible outside of the column. Hence, the functionality and visible finish of the column is entirely determined by the cover profiles, which benefits the variation in functionality.
