Abstract (en)

[origin: WO2021215918A1] The invention relates to a processing device for processing one or more flowable materials, such as pharmaceuticals, the processing device comprising: a housing having a cylindrical processing chamber, and having an inlet in fluid communication with the processing chamber, and an outlet in fluid communication with the processing chamber and at a distance from the inlet in a direction along the longitudinal direction of the cylindrical processing chamber; an agitating rotor arranged axially within the processing chamber and configured for agitating one or more flowable materials within the processing chamber, wherein the processing device further comprises a dust directing member arranged at the agitating rotor and configured for substantially preventing a cloud of dust within the processing chamber from reaching the outlet.
