Abstract (en)
[origin: WO2021214378A1] According to at least some example embodiments, a method of operating a master donor next generation Node B (gNB) of a communications network, the communications network further including a secondary donor gNB and an integrated access and backhaul (IAB) node, includes generating, by the master donor gNB, a request to set up a secondary control interface between the secondary donor gNB and the IAB node; and sending the request.
