Abstract (en)
[origin: EP4140668A1] A grip device is disclosed. A grip device according to an embodiment of the present disclosure comprises: a first finger; a second finger facing the first finger; a first link part having a first guide slot and supporting the first finger; a second link part having a second guide slot, disposed to intersect the first link part and supporting the second finger; a hinge which can move inside the first guide slot and second guide slot and connects the first and second link parts at the intersection point of the first link part and second link part; a first actuator for adjusting the distance between the first finger and second finger by moving the first link part and/or the second link part; and a second actuator for moving the hinge inside the first guide slot and second guide slot.
