Abstract (en)  
[origin: WO2023025645A1] The invention relates to a panel, in particular a floor panel, comprising: - an upper face (4); - a lower face (6); - a first side edge (8); - a second side edge (10) which is opposite the first side edge (8); - a first locking element (12) which is formed on the first side edge (8); - a second locking element (16) which is formed on the second side edge (10), the first locking element (12) and the second locking element (16) corresponding to each other; - a first abutment face (14) which is formed on the first side edge (8), the first abutment face (14) adjoining the upper face (4); and - a second abutment face (18) which is formed on the second side edge (10), the second abutment face (18) adjoining the upper face (4); wherein the technical problem of preventing moisture and dirt to enter between the connected panels is solved in that, at least on part of at least one of the abutment faces (14, 18), a deformation element (20) is provided, and in that, on the other abutment face (18, 14), a deformation portion (21) corresponding to the deformation element (20) is provided. The invention also relates to a system composed of a plurality of panels.
