Abstract (en)
[origin: WO2021221496A1] A device for turning a patient lying on a sheet in a bed, wherein the device comprises a mobile base for moving across a floor, a frame supported by the base and provided with a driven elongated roller that is adapted for engaging the sheet and winding part of the sheet onto the roller, a lifting means adapted for lifting and lowering the frame relative to the base, wherein the device is adapted for driving the roller to wind the sheet onto the roller while simultaneously driving the lifting mechanism to lift the frame.
