Abstract (en)
[origin: WO2021219433A1] The invention relates to a hand-held machine tool comprising a drive device, by means of which a tool that can be operatively connected to the machine tool can be actuated, further comprising a control device for actuating the drive device, and at least one capacitive sensor element (40) that is operatively connected to the control device. The at least one sensor element (40) includes a first element (42) that is connected to the control device via a cable (44), and a second element (43) which is arranged at a distance from the first element (42), can be moved relative to the first element (42), and can be actuated at the user end.
