Abstract (en)

A loader (1) for automatic rewinding machines of filler material wire, said loader (1) comprises an outer protection frame (2) suitable for resting on a reference surface (S), and a storage unit (3) contained in the outer protection frame (2) and configured to accommodate a plurality of flanged reels (F) configured to be moved to an automatic rewinding machine which is operatively and physically arranged downstream of the loader (1) and which automatically winds a filler material wire about a central drum (T) of each of the flanged reels (F). In particular, the loader (1) comprises a preloading and withdrawal station (4) physically distinct, separate, and independent from the storage unit (3), configured to receive from the storage unit (3), in a progressive manner and at successive intervals, the flanged reels (F) divided according to a predefined quantity and to convey them by translation to said automatic rewinding machine.
